ALPHAMIND

PROJECT MEMO

ChimpX		
Vertical	**AI-powered DeFi SuperApp** (AI Agents / DeFi UX / Chain Abstraction)	**Links:** [Pitch Deck](#) [Tokenomics](#) [Website](#)
Main Social Channel	X **35.9K** followers	

AlphaMind ROUND DETAILS	
Ticker	$CHIMP
Price	$0.25 (37.5% discount to TGE price)
Round FDV	$5M
TGE Plans	16 February 2026 (DEX - Pankacke Swap)
Vesting	25% TGE unlock, 3 m linear vesting

What they are building

ChimpX is building an AI-powered SuperApp that lets users execute core DeFi actions across chains via simple commands - swaps, bridging, portfolio actions - with a "deposit once, operate everywhere" UX enabled by universal accounts and gas abstraction.

Problem & Solution

Problem: DeFi remains fragmented for retail. Users juggle multiple dApps, chains, wallets, gas tokens, and multi-step flows - creating friction, errors, and drop-off at exactly the moments when speed and clarity matter most.

Solution: ChimpX compresses multi-chain complexity into a "deposit once, operate everywhere" experience using universal accounts and gas abstraction, turning cross-chain actions into simple commands with a unified execution layer.

Core Team

Akshay Nassa, CEO   **Rahul Kumar, COO**   **Saurabh Sharma, CFO**

- **Akshay "Aki" Nassa,** CEO: DeFi background since 2016; positioning built around simplifying DeFi UX for retail.
- **Tejas Chitnis, CTO:** leads product iterations and multi-chain execution stack
- **Rahul Kumar, COO:** handles operations
- **Saurabh Sharma, CFO:** finance leadership

Backers/Partners

ChimpX is connected to a strong Web3 ecosystem stack spanning infrastructure, wallets, and cross-chain rails, including BRINC, MetaMask, Orbiter, Particle Network, Linea, Mendi Finance, Zonic, Layer Bank and Lumia, alongside a broader set of 60+ partners and integrations.

This matters because DeFi "superapps" only work when they can plug into trusted primitives (accounts, routing, distribution) and ship new integrations fast, rather than operating as a standalone UI.

Traction

- ~12.7K users, ~8,000 monthly active participants in competitions/social activities
- ~$6K/month fee revenue, ~$2M volume,
- 21+ dApps integrated, 80+ partners/integrations

Token Utility

- Membership / Access: Use the SuperApp via subscription, or unlock cheaper ongoing access via staking $CHIMP (membership/credits model).
- Governance: stakers vote on integrations/features priority.
- B2B Optionality: Agent-as-a-service / embedded widget path for projects and ecosystems, extending distribution beyond retail.
- Rewards Loop: Points/credits (e.g., XP-style incentives) designed to convert into token-aligned participation.

Competitive Edge

- Gasless, universal account UX: deposit once → transact cross-chain without juggling gas tokens.
- Execution-first AI (hybrid control): manual mode for power users + agent automation for retail simplicity.
- SuperApp breadth vs point tools: cross-chain swaps + portfolio, with perps on roadmap; broader coverage than most "AI DeFi" apps.
- Built-in growth loops: referral fee-share + HOOTs/XP incentives to drive repeat activity.
- Clear monetization + token-aligned access: subscription/credits + CHIMP-based membership/governance; B2B agent-as-a-service path.

Alphamind Analysis

ChimpX addresses a real retail DeFi bottleneck - multi-chain execution complexity - with a concrete product thesis & early traction claims.
The key differentiator of AlphaMind round is better entry terms VS all other public venues: $0.25 per CHIMP with 25% TGE unlock, while other launchpads are at $0.35 with 20% unlock, while the broader TGE/listing reference price is $0.40. This creates a cleaner risk/reward setup for retail: lower entry valuation, higher initial liquidity, and a clearer path to participate under the same 3-mo vesting. Team plans to allocate all proceeds from community sales to liquidity / market-making support for TGE.

Risks & Opportunities

Opportunities:
- Best-in-market entry terms (AlphaMind-exclusive): lower entry price + higher initial unlock improves risk/reward vs all other public venues.
- Retail UX wedge: gasless, "deposit once" flow can expand adoption beyond DeFi power users.
- Growth loops: referral fee-share + HOOTs/XP for repeat usage & organic growth.
- B2B optionality: embedded agents add distribution & revenue.

Risks:
- Crowded AI x DeFi category makes it harder for compete
- Multi-chain complexity: routing + integrations expand tech surface area and operational/security risk.
- Retention post-incentives: long-term success depends on keeping users active beyond quests and reward mechanics.
- Market risk: weak retail sentiment can create TGE volatility regardless of fundamentals.
